

General Transport Call

SME Celtrak <http://www.celtrak.com>

Celtrak specialises in the design and development of telematics services and solutions using mobile data and Internet technologies. Since the company's incorporation, it has grown by developing enhanced **ITS (Intelligent Transport Systems and Services)** that add value and functionality to a range of business sectors. The company designs, manufactures and supplies sophisticated Telematics Systems, Web-based Operations Management Software, Back-office Data Centre and Customer Support Services. Because the telemetry units provide real-time information on the deployment and use of assets (vehicles, plant and special equipment), Celtrak can provide real-time management solutions for companies with complex operations and projects, like logistics companies, large civil engineering companies, utilities companies and waste management companies.
